

Welcome to Preschool B

Literacy, numeracy and concept development are nurtured in an environment that is enriched with opportunities for the children to learn in an emerging, self-directed way.

The children have many opportunities to explore the natural environment that surrounds the Family Centre. The outdoors is often incorporated into small group time to observe and discover from the wonders of the world around us.

In support of the Family Centre philosophy, there are events planned throughout the year that encourage family involvement and participation. These include workshops and outings such as our annual BBQ or an evening at the local apple orchard. Siblings within the center often enjoy informal visits with each other throughout their days.

The children's discoveries often lead to child directed projects - some of which support early sciencing skills such as this baking activity.

The children experience many different cultural celebrations within the preschool program. With the support from parent volunteers the children created a special treat for the Chinese New Year.
